Michigan State Profile

Contractual Agency: Michigan State Police, client since 2013

State Summary Registration is done by Sheriffs, Police Departments and State Troopers. OffenderWatch runs a real-time process which updates NCIC with offender update data. Development is underway to develop an interface between OffenderWatch and the state criminal history and the Department of Corrections databases.

Offender population: Approximately 42,000

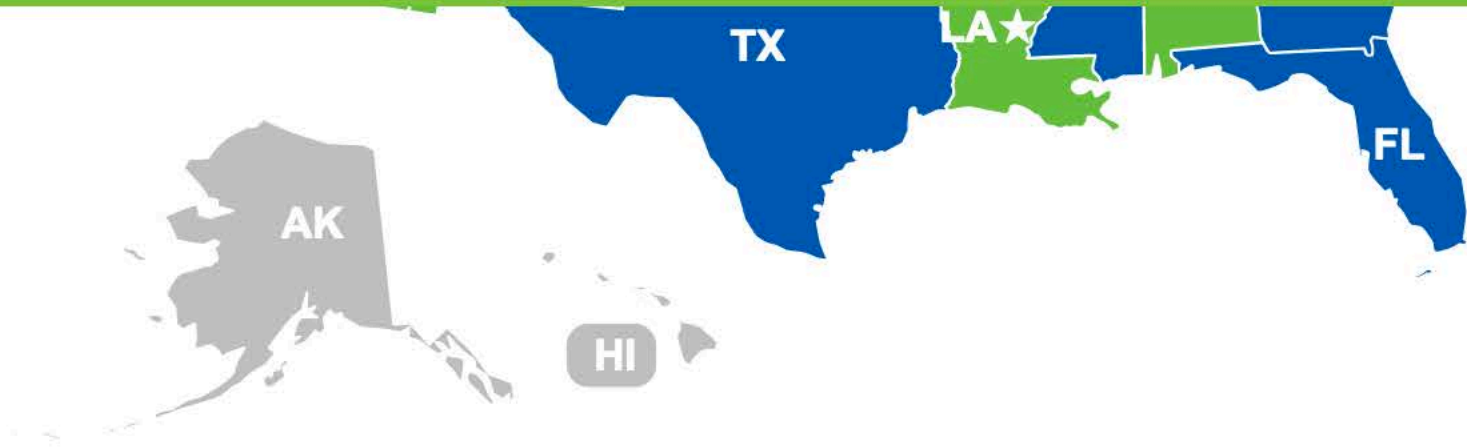

Public Registry: <http://www.mipsor.state.mi.us>, The custom public website for Michigan, allows for a search based on the last name, or county. It also supports the ability to search for offenders locating them with the system's mapping capability. Searching an address allows citizens to narrow the search when offender populations are large. Offender result pages show a map and a list of all day cares and schools within a specified radius of the offender's address. Citizens can sign up from the website for email notification whenever an offender moves within a specified radius for a particular address.

Notifications: Notifications are not mandatory. The Sheriff may elect to conduct community notification via public news and or postal notification.

Safety Buffers: No adult criminal sex offender shall establish a residence or any other living accommodations within 1,000 feet of a protected area. Protected areas include, but are not limited to, schools, churches, daycares, public parks and playgrounds.

Historical Summary: In 2013, we were selected by the state of Michigan to implement and deploy the sex offender data collection tool, OffenderWatch®, including public website development, email notification, and
